B. Put these steps in reinstalling system in the correct order.

- a. You may be asked to restart the computer. The computer may also restart on its own several times before it's finished. Allow a few hours for the process to complete, depending on your hard drive and OS.
- b. The startup menu will appear with an option to access the Boot Menu. Use the Boot Menu to tell the computer where to start from - either the USB or installation disk you created and inserted early on.
- c. Follow the prompts to partition, format, and install Windows onto your new hard drive. Most users can use the default settings and not customize anything at this time.
- d. Get started by plugging in your PC and powering it on. For HP computers, press the "Escape" key repeatedly after startup.
- e. Once the computer has restarted for the final time and you see a Windows log-in screen, you're ready to begin using your new drive.

C. Listen to spokesperson for a major operating system company giving a speech: "why open source is a bad idea". What reasons does the speaker give to use proprietary software? Make a list. (Listening Eleven)

well, there are several reasons why proprietary software is better than open source operating system;

1. many people think that open source is cheaper than proprietary software. however, it's not true. it's costs less to buy to begin with, but it's not the only cost. there's also the cost of training and the cost of support
2. proprietary software is very common so there are many people already know how to use it. But open source often unfamiliar. So additional training is required
3. open sources operating system provides often make them money by charging for support. but if u buy proprietary software, support is free
4. the company that produces proprietary software can pay salaries to the software developes
5. proprietary software is usually better with more features. otherwise, open source has bad features such a design, the video editing, there are not very good

so, for those purposes, the industry standard is to use proprietary software
